

Dealer-FX

Looking for a

Software Developer

Canada or United States – Remote

Who We Are

Since 2007, Dealer-FX has transformed how automotive retailers manage their service operations and interact with consumers. Through advanced data integrations and mobile technology, Dealer-FX streamlines processes and communication for automotive service departments while delivering convenience, transparency, and trust to consumers. Dealer-FX is a wholly owned subsidiary of Snap-on Incorporated (NYSE: SNA), which acquired Dealer-FX in 2021.

Dealer-FX has been serving automotive OEMs and dealerships for almost a decade. Dealer-FX is transforming how millions of consumers interact with automotive brands and their retailers. Our platform uses advanced data analysis and mobile applications to deliver convenience, transparency, and trust to consumers and increase efficiency, profitability, retention, and brand loyalty to OEMs and dealers.

What we are looking for

At Dealer-FX, we put our users first. The automotive landscape and world are constantly changing, so we need a Full Stack Developer who is continuously adapting and excited to work on products that affect thousands of people daily.

In this role, you will be responsible for the development and enhancement of a SaaS solution. You will create new application functionality and improve on existing web and back-end applications.

Working closely with various teams and senior management, you will develop and maintain system documents, create automated testing capability for new and existing applications and develop RESTful API-based services using ASP.NET Core Web API (MVC). You will also engage in the full-cycle development process from design to the development, test, release, and maintenance of applications.

Responsibilities

- Code/design for small to large projects/programs identifying, tracking, and resolving technical issues
- Contribute to successful solution development and delivery by identifying risks and developing/recommending mitigation strategies
- Provide input and work with other teams in creating new and modifying existing database or infrastructure objects based on required functionality
- Participate in walkthrough reviews of all technical design, specifications, programs, and unit test plans
- Assist the DevOps/support teams in various activities, such as troubleshooting high priority implementation issues, production investigations, etc.

- Define well thought out design patterns and code with an emphasis on quality, simplicity, maintainability, and performance.
- Contribute to the planning, execution, and delivery of your commitments.

Qualifications

Minimum qualifications:

- Post-secondary degree in computer science or a related major
- 5+ years of software development experience
- Experience with .NET Framework, .NET Core, ASP.NET Core, MVC, Entity Framework, and RabbitMQ
- Framework/Library experience (Angular or similar, e.g., Vue.js, React)
- Experience with HTML, JavaScript, CSS
- Strong understanding of .Net WebAPI, RESTful APIs development
- Experience with C# and Async technologies
- Knowledge of AWS technologies (e.g., Lambda, EC2, S3, DynamoDB, API Gateway, CloudWatch)
- Knowledge of Microservices/ Terraform / CI/CD Pipeline
- Knowledge of SOAP services integration
- Experience using service-oriented architecture (SOA) and Web Service Development
- Knowledge of MS SQL Server, Database structures and design
- Excellent verbal, written and interpersonal communication skills
- Strong problem-solving skills
- Experience working with agile scrum methodology

Preferred qualifications:

- Any experience in building Web components will be a big plus

What's in it for you?

- Vast opportunities for growth
- Competitive compensation packages
- A flexible work schedule for work-life balance
- Comprehensive Training and Development support
- Group health and dental benefits
- Employee Assistance Program
- 3 weeks of paid vacation
- Cool company events and team building
